Department of Genetics  
University of Wisconsin  
Madison, Wisconsin

Dear Josh:

oh?  
This is just a note to let you know that all of your choline mutants have been lyophilized with the exception of two which failed to grow on transfer. These are: W-757 (isoleucine and valine) and W-760 [757] (arginine). Perhaps you could send fresh transfers on these two so that the collection can be complete. Don't forget that we have all of these strains and feel free to ask for one when it is needed.

Thanks again for your hospitality during the meetings in Madison. I enjoyed my visit with you a great deal. Please give my thanks also to Esther.

Beadle has just asked me to give a short paper on a program he is organizing for a symposium on recent advances in genetics for the Western Society of Naturalists meeting here in December. If you have any new, hot information that is not yet published which you would like brought to the attention of this group, drop me a line giving details and I shall be glad to put it before them.

With best regards,

Yours,

  
E. L. Tatum
